In August exane pleiade 2 fund (P) gained 0,08%.

Performance analysis

The fund's positive performance was attributable to profitable positions in the telecoms sector (+0.97%) via the exane archimedes fund. Our midcap positions weighed on performance (-0.57%) via the exane micromegas fund. Other sector plays generated various levels of alpha, ranging from marginal (-0.02%) in chemicals, via the exane mercury fund, to slightly positive among industrials (+0.16%) via the exane vauban fund.

Main positive contributors:

- Essilor (15bps) published earnings demonstrating that internal growth momentum and margin outlook are improving once again,
- Wacker Chemical (8bps) staged a recovery following a correction at the end of July and in early August, despite price pressure in the polysilicon market,
- Abengoa (8bps) gained further impetus following the IPO of Abengoa Yield and as Spanish rates eased.

Main negative contributors:

- Arkema (-21bps) lost 25% in a single trading session on the 1st of August after issuing a profit warning. The position was maintained however, as the stock was heavily oversold in response to the announcement.
- Teleperformance (-5bps) saw almost all of July's gains wiped out, for no apparent reason, and despite highly encouraging guidance,
- Elior (-4bps) was hit by a sell-off after publishing slightly disappointing figures.

Key portfolio changes

In the consumer sectors, the Diageo and Pernod weightings were strengthened significantly, given that trends appear likely to improve in the near future. Positions in Heineken and Intertek were liquidated.

Among financials, euro zone banking positions were increased, via BBVA and Société Générale. A position in Aegon was also initiated, in order to gain exposure to the dynamic life-insurance market in the US.

In the commodities sectors, BHP was sold and the funds were reinvested into Arcelor Mittal, which revised earnings forecasts significantly lower for the full year and could therefore ultimately beat consensus in Q4.

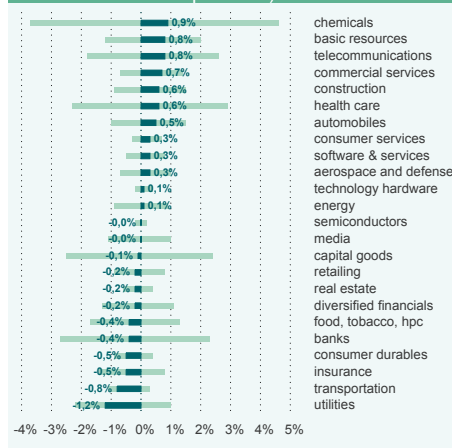

In the energy sector, Total, following very strong earnings, replaced Royal Dutch, which lacks further catalysts.

In telecoms, a position was initiated in T-mobile to play an improvement in the terms of the takeover bid by Iliad. The short position in Deutsche Telekom was closed-out for the same reason. Telecom Italia was also included in the portfolio, as the stock now harbours three types of potential optionality: consolidation in the Italian market; the sale of Tim Brasil and the possibility that Deutsche Tel uses the funds from its sale of T-mobile to launch a bid on Telecom Italia.

Risks and exposure

exane pleiade 2 fund (P) gross exposure based on full look-through to the underlying assets is 63,3%. Net capital exposure is 1,6% compared to 2,1% and 1,9% compared to 2,8% beta-adjusted. 10-day Var stands at -0,3% compared to -0,4%. The fund holds 206 long positions and 206 exits.
