

Fund Overview

Legal form	Sub-fund (the "Fund") of the Luxembourg SICAV BNP Paribas Flexi I
Launch date	15-Nov-2019
Fund Manager	PANEL Maxime
Total net assets	261.16
Management Company	BNP Paribas Asset Management Luxembourg
Capital protection	No capital guarantee
Management by delegation	BNP Paribas Asset Management Europe
SFDR Article	6

Investment Objective

The Fund investment objective is to offer investors using a synthetic replication method (via TRS - Total Return Swap) an exposure to the commodity markets - excluding the agricultural and livestock sectors - via a quantitative, directional investment strategy exposed to commodity futures through diversified commodity financial indices. The Fund also aims to outperform its benchmark, the Bloomberg Commodity ex-Agriculture and Livestock Capped Total Return Index.

Investment strategy

The Fund is exposed to two underlying strategies (through two financial indices): (1) BNPIECE: a "Diversified Enhanced Carry" strategy with a diversified exposure and risk control layers in order to reduce the tracking-error (TE) relatively to the Fund benchmark. (2) BNPIOBXA: an "Oscillator Backwardation" actively weighted strategy with a slightly higher tracking error than BNPIECE but also aiming at generating more performance, by combining both "Backwardation" with "Momentum" indicators. Effectively, the Fund combines a low TE strategy with a high TE actively weighted strategy in order to (1) more easily control the TE of the Fund by overweighting BNPIECE in times of stress and (2) extract more performance by allocating to the higher potentially performing BNPIOBXA strategy otherwise.

The Fund then aims at all times for an equal risk contribution allocation between these two strategies while attempting to keep the tracking-error below a 4.5% target.

Fund management comment

The BNP Paribas Flexi I Commodities (BFICUIA LX Equity) gained in February. The BCOM ex-Agriculture & Livestock Capped Index gained +3.45%. The MSCI AC World Index finished February at -0.7%, driven by the unpredictability of Trump's trade decisions. Poor US economic indicators led to a 'risk off' movement—falling equities, widening credit spreads, and lower yields by the end of the month. Meanwhile, emerging markets rose slightly (+0.4%), led by Chinese equities (+11.8%) on stimulus expectations and regulatory easing. Eurozone equities outperformed (+3.3% for the EuroStoxx 50), benefiting from concerns about US technology stocks and potential increased defence spending in Europe. US markets declined, with the Nasdaq down 4.0% and the S&P 500 down 1.4%. The US 10-year T-note yield fell to 4.21% (-33bp) on growth concerns, and German Bund yields dropped to 2.41% (-6bp), with discussions around increased defence spending and cautious ECB comments around rate cuts. The US dollar index (DXY) fell 0.7% after a series of poor US economic data publications and a retracement from the dollar's overvaluation in 4Q 2024. A mixed performance was observed in Commodities in February with the Energy sector (+4.52%) and Industrial Metals (+2.41%) up, while Precious Metals dipped slightly (-0.42%). Gold (+0.48%) saw modest growth whilst Silver (-3.31%) declined. Copper (+5.26%) saw continued price support throughout February from tariff fears on imports. An increased supply coupled with a depressed demand outlook weighed on Brent and WTI. The energy sector's performance was mainly driven by Natural Gas's 25.15% rally, its strongest month since the end of 2022, fuelled by inventory drawdowns due to cold weather and increased CTA flows. As gas prices increased, the contango exhibited by the natural gas forward curve flattened, which resulted in underperformance of the fund, and notably of the deferred BCOM expositions, compared to the market benchmark.

---	---	---	---	---	---	---

The summary risk indicator is a guide to the level of risk of this Product compared to other Products. It shows how likely it is that the Product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this Product as 4 out of 7, which is a medium risk class. Be aware of currency risk. If the currency of your account is different from the currency of this Product, the payments you will get depend on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Risks

Risk of capital loss: The Fund does not benefit from any guarantee or capital protection. Shareholders may therefore lose all their invested capital.

Model risk: The model used to determine the asset allocation for each underlying strategy is based on a quantitative approach. There is a risk that the model will not be efficient as there is no guarantee that the indicators defined will be relevant in the future.

Risk associated with a commodity futures index: The Fund's various underlying strategies are based on commodity futures, the Fund is consequently exposed to the liquidity risk inherent in trading in this type of financial instrument.

Counterparty Risk: This risk is associated with the ability of a counterparty in a financial transaction to fulfill its commitments like payment, delivery and reimbursement.

Risk related to the use of forward financial instruments: In order to achieve its investment objective, the Sub-Fund makes use of forward financial instruments traded over-the-counter that allow it to replicate the performance of the strategy. These instruments may involve a series of risks that could lead to adjustments or even the early termination of the instrument, which may affect the Sub-Fund's NAV.

Glossary

EAA - Fund Commodities Broad Basket: Broad-basket portfolios can invest in a diversified basket of commodity goods including but not limited to grains, minerals, metals, livestock, cotton, oils, sugar, coffee, and cocoa. Investment can be made directly in physical assets or commodity-linked derivative instruments, such as commodity swap agreements. Source: Morningstar ©2017 Morningstar, Inc. All Rights Reserved.

Net Asset Value - Represents the net assets of the Fund (ex-dividend) divided by the total number of shares issued by the Fund.

Historical tracking error - Measure of the actual deviation of the Fund's returns from the comparative benchmark index returns (annualised). A higher number means that the Fund is taking greater risk against the benchmark.

Historical Volatility of Portfolio - Illustrates the dispersion of the fund's realized monthly returns around the average monthly return, indicating how volatile the Fund's return is over time. The higher the number the more volatile the Fund's returns.

UCITS V - "UCITS" or "Undertakings for the collective investment in transferable securities" are investment Funds regulated at European Union level. They account for around 75% of all collective investments by small investors in Europe. The legislative instrument covering these Funds is Directive 2014/91/EU.

Ongoing Charges - The ongoing charges figure is based on the Fund's expenses during the previous year. It excludes transaction costs and performance fees incurred by the Fund.
